1

Pulire le piste di scorrimento del binario in alluminio e le ruote. Inserire il carrello e la slitta in plastica della staffa regolabile nel binario.

Clean the guide tracks of the aluminium rail and the wheels. Fit the carriage and the plastic slide of the adjustable bracket into the rail.

2

Inserire il fermo e l'eventuale attivatore nel binario:

- Stringere le viti con moderazione per evitare danneggiamenti.
- Dopo il posizionamento stringere le viti fino portarle a filo.

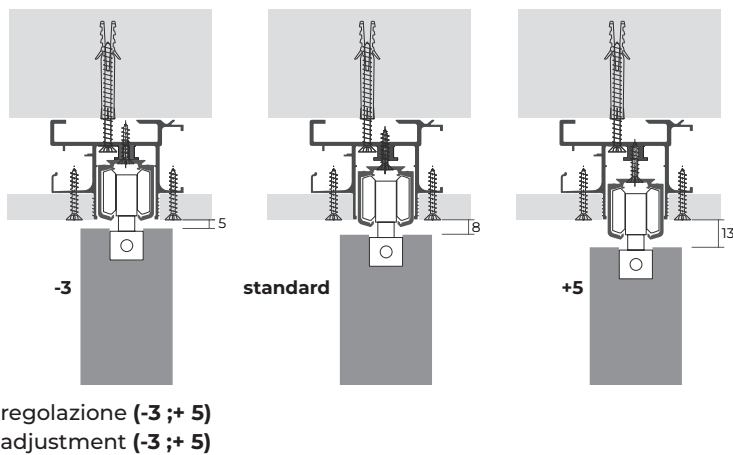

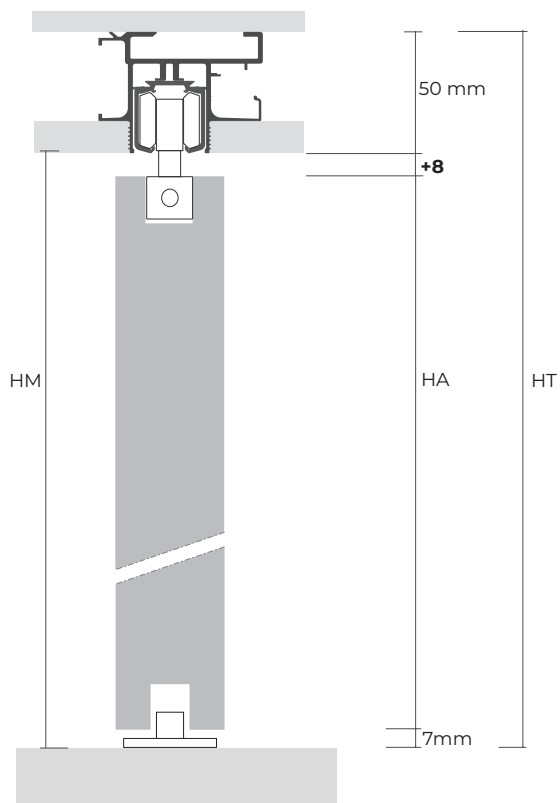

Insert the stop and any activator into the rail:

- Tighten the screws with moderation, to avoid breakage.
- After placement tighten all the screws until flush.

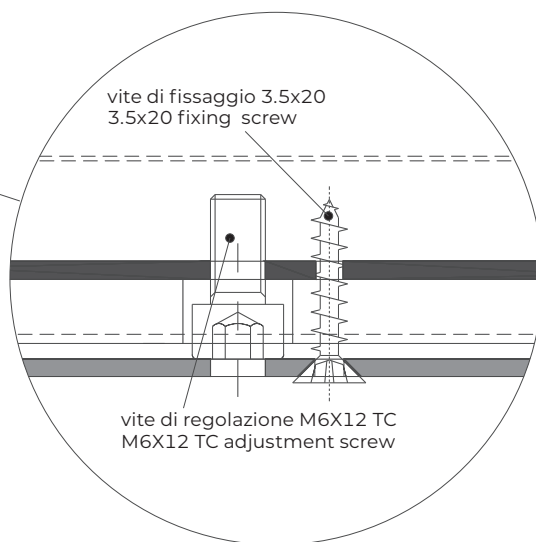

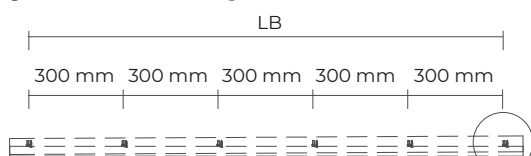

3

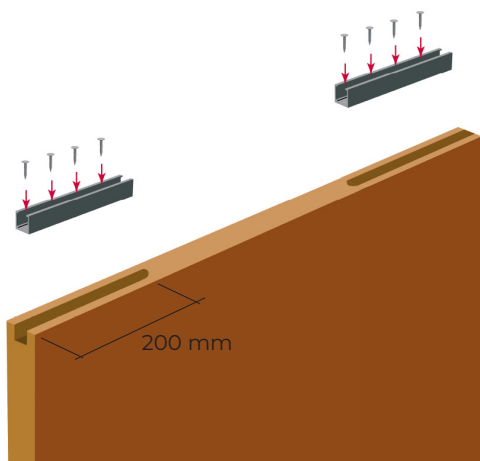

H = altezza nominale / leaf nominal height
 HA = altezza reale anta / leaf real height
 HM = altezza foro muro / internal frame height
 HT = altezza telaio / frame height

H = HM-18 mm
 HT = HM+50mm
 HA = H+3mm

LB = lunghezza binario / rail length

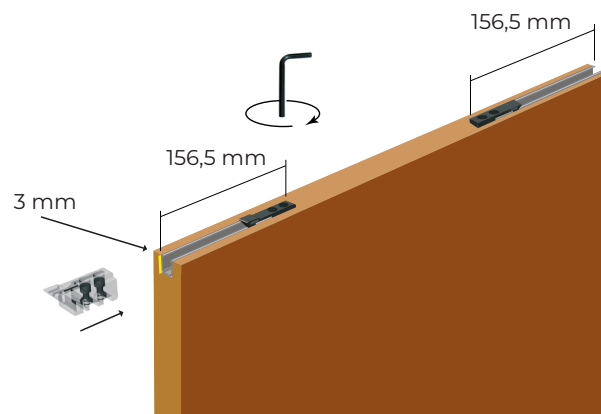

Fissare la staffa in alluminio a 3 mm dalle due estremità della porta.

Fix the aluminium bracket 3 mm from the two ends of the door.

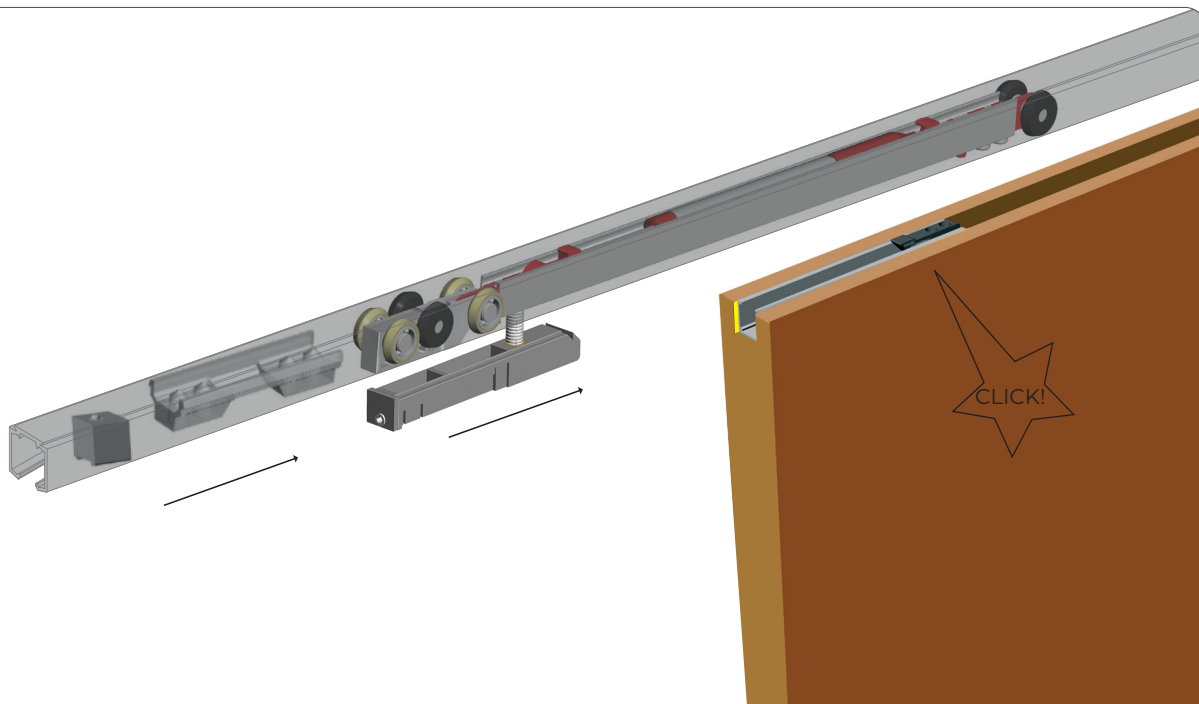

5

Fissare il blocchetto di aggancio in fondo alle staffe.

Fix the coupling block on the bottom of the brackets.

6

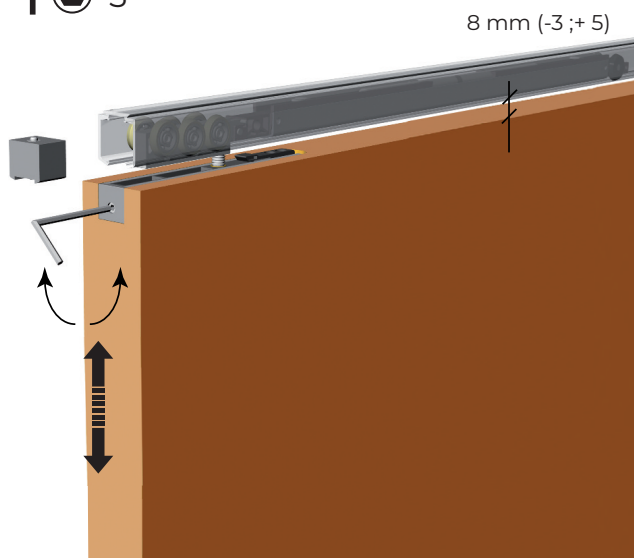

Posizionare la porta in corrispondenza del binario ed inserire le slitte nelle staffe spingendole fino al click di aggancio avvenuto.

Position the door in correspondence with the rail and insert the slides into the brackets by pushing them until they click into place.

7

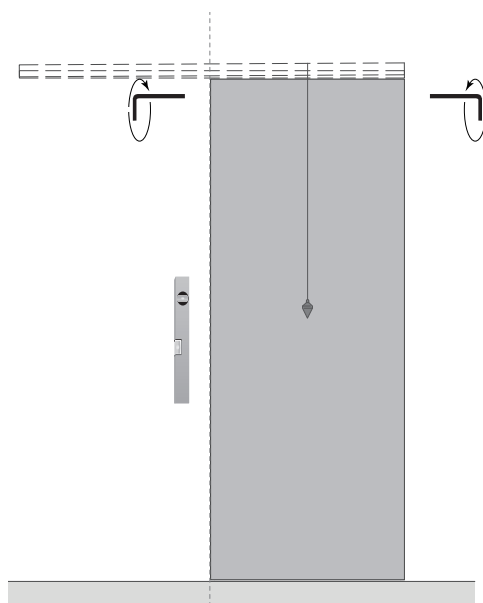

7  3

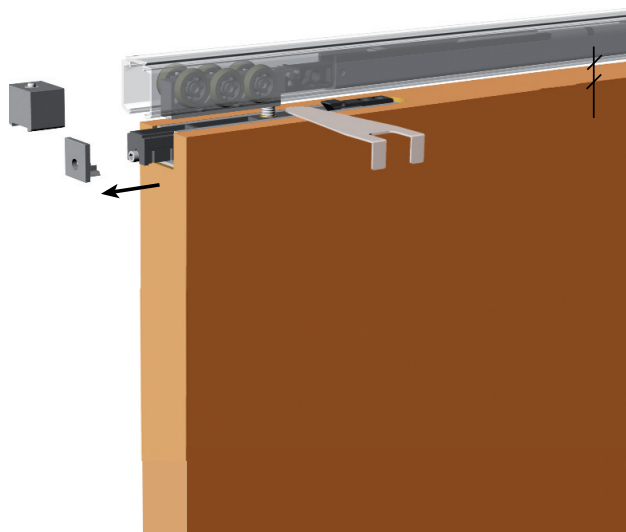

Dopo l'aggancio delle staffe è possibile effettuare la regolazione di perpendicolarità agendo dal fianco con una chiave a brugola.

The perpendicularity can be adjusted after coupling the brackets by adjusting the side using an Allen key.

8

8 mm (-3; + 5)

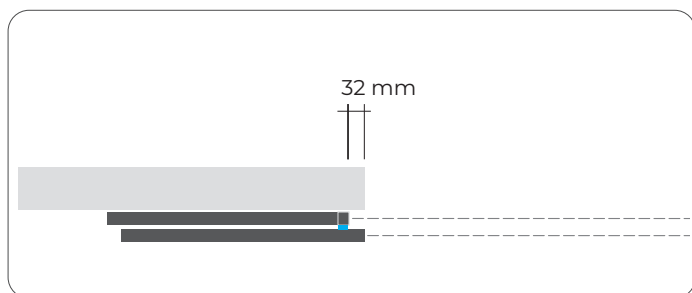

Per l'eventuale sganciamento del carrello, inserire l'attrezzo incluso come indicato. L'operazione necessita di almeno 4 mm di spazio tra binario e anta.

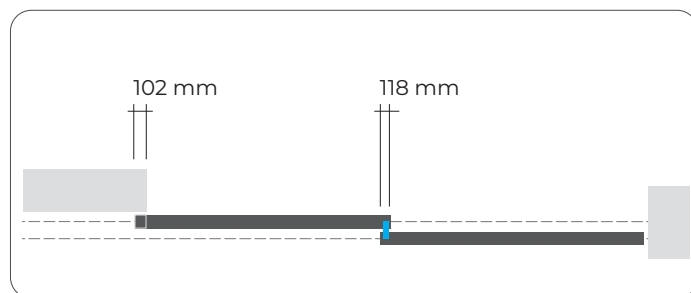

If it is necessary to uncouple the carriage, insert the supplied tool as shown. This operation requires a space of at least 4 mm between the rail and the leaf.

Устройство стабильности

ruota con azione stabilizzatrice a molla
wheel with spring-loaded stabilizing action

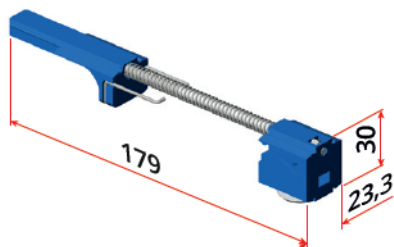

La ruota rende stabile le ante con ampia larghezza evitando vibrazioni.
The wheel stabilizes wide panels, preventing vibrations.

L'escursione della molla interna di $7 \div 12$ mm mantiene la ruota a contatto con il pavimento.
Thanks to the internal spring travel of $7 \div 12$ mm, the wheel remains in constant contact with the floor.

Adatto a pavimenti senza variazioni di pendenza, con superfici lisce ed uniformi, sconsigliato in caso di fughe, moquette o pavimenti sensibili ai segni.

Suitable for floors without slope variations, with smooth and even surfaces; not recommended for joints, carpets, or floors sensitive to marks.

PUSH PULL - Sistema di espulsione a spinta
 PUSH PULL - The push ejection system
 PUSH PULL - Système d'éjection par poussée
 PUSH PULL - Sistema de apertura por presión
 PUSH PULL - Фиксированная дверь в проем

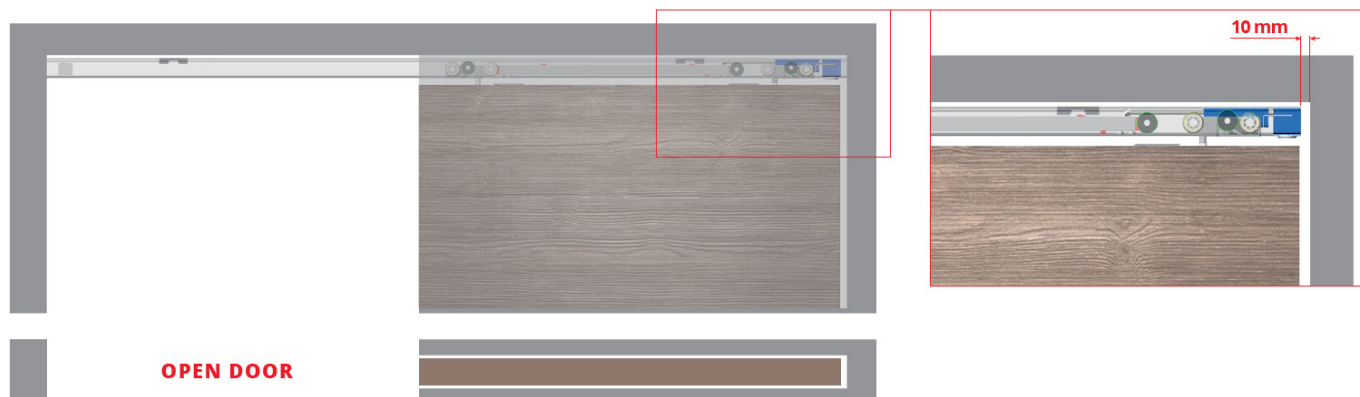

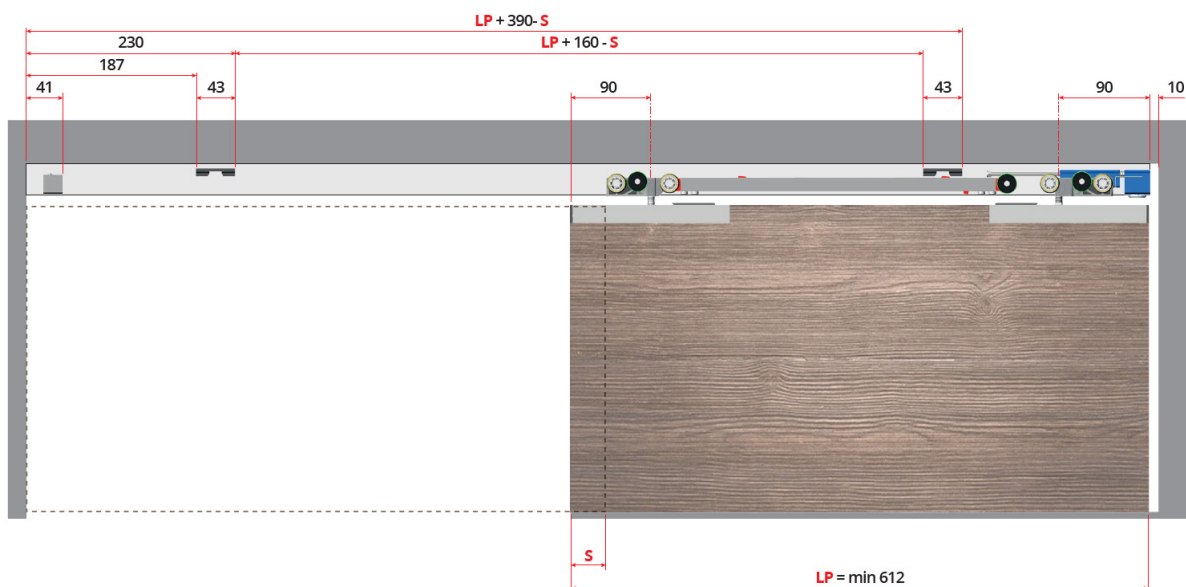

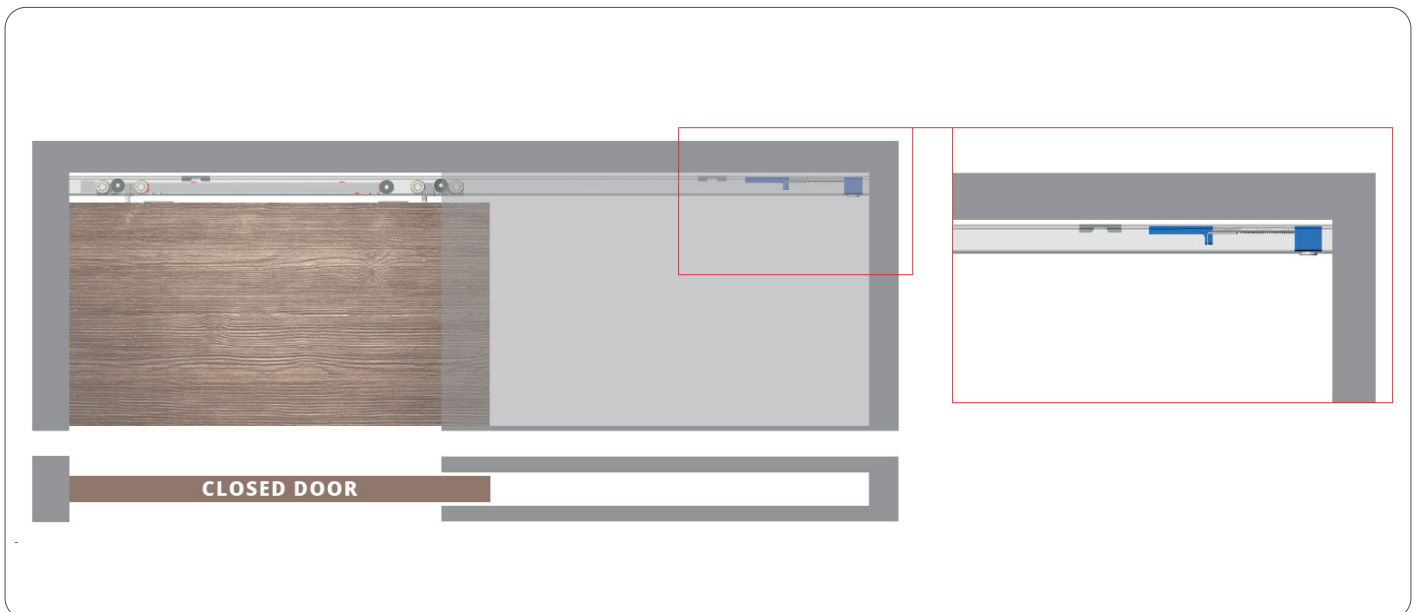

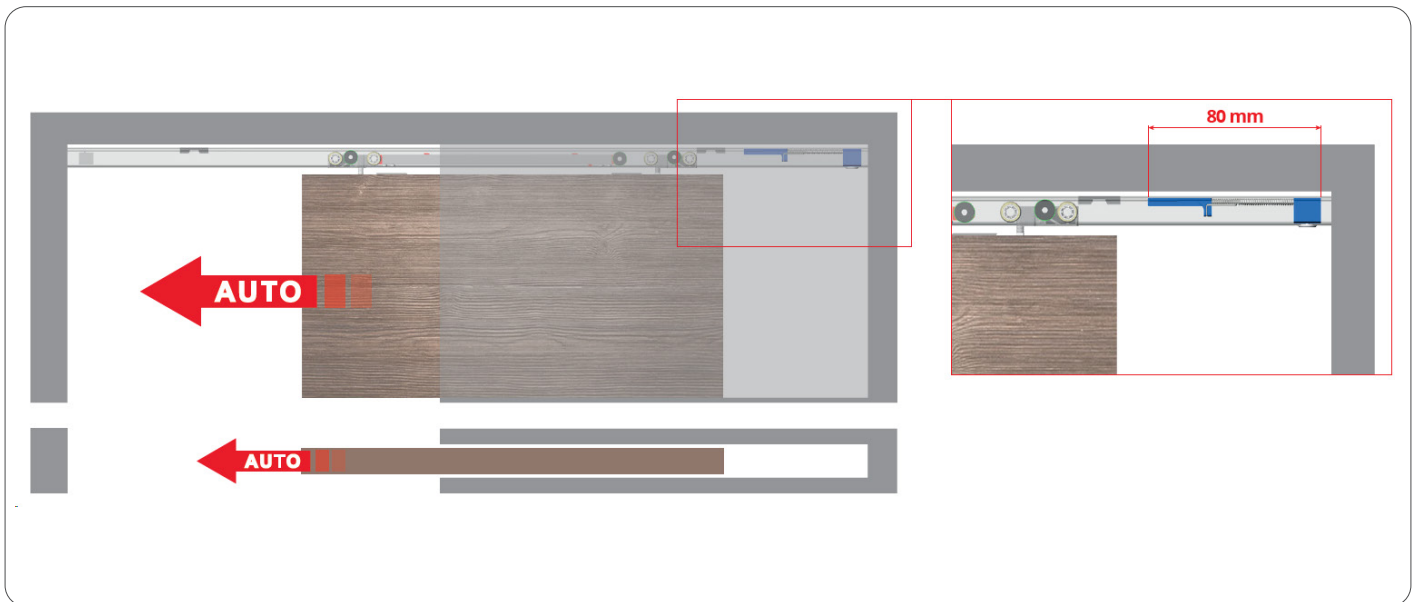

Obbligatorio:

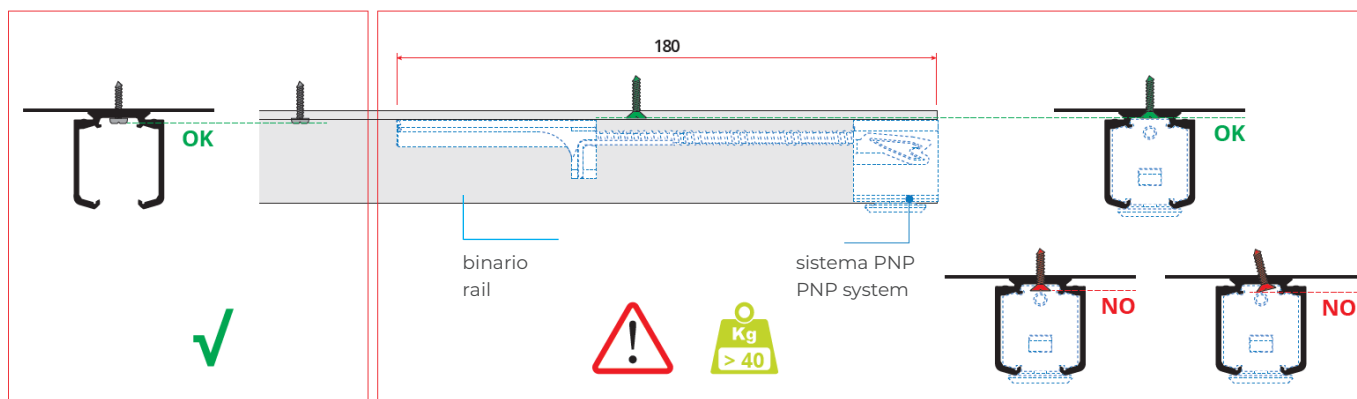

- 10 mm di spazio dietro alla porta
- falsa manovra per "agganciare" la porta quando è aperta

Mandatory:

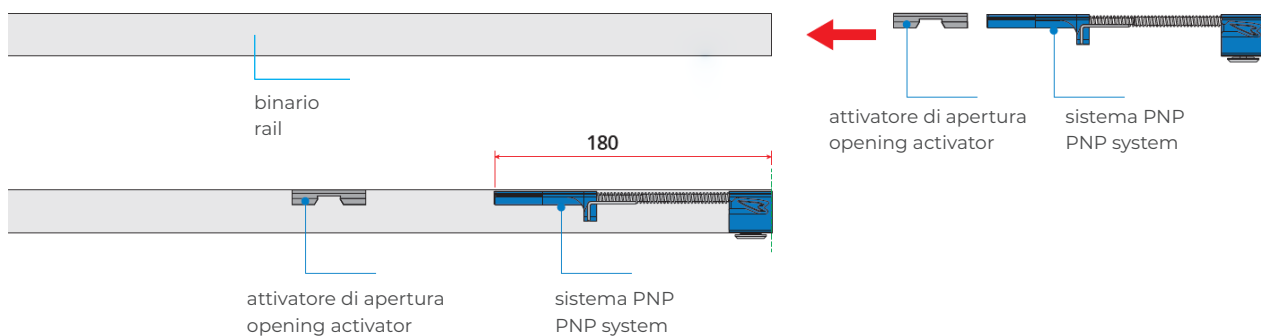

- Leave 10 mm of clearance behind the door
- Use a false movement to "engage" the door when it is open

- 1  Per porte di peso superiore ai 40 kg, fissare anche i primi 180 mm del binario utilizzando viti svasate completamente incassate nel binario
For doors weighing more than 40 kg, also fix the first 180 mm of rail using countersunk screws fully recessed in the rail

2

Prima di installare il binario all'interno della parete inserire il sistema di PNP e l'attivatore di apertura
Before installing rail in the wall, insert the PNP system and the opening activator
